

SERVICES & PACKAGES

1 - FULL-SERVICE INTERIOR DESIGN

The role of an interior designer can be categorized in two phases of responsibility - **design development and project execution**. Full-service interior design includes all elements of both of these roles.

We believe strongly that even the best designs fall short if the execution is not carefully managed. Through years of observing the powerful combination of great design and diligent project management, we have developed a full-service approach that maximizes a client's budget and project potential. With full-service interior design you can expect :

- Geographic and architectural research
- Material durability + product longevity research
- 2D floorplans and accurate 3D models
- Comprehensive design proposals + revisions
- All product procurement - ordering, order tracking, storage and delivery management. etc.
- All contractor management - site visits, specification books, budget and timeline maintenance, etc.

To ensure the best possible client experience, we offer only a full-service design package for most projects.

2 -DESIGN GUIDES

It has always been our mission to make interior design as accessible as possible, and we understand that full-service design is not in everyone's budget. We recently began offering "Design Guides" to **select clients** to help make the most of limited budgets and allow access to our design development services if an investment in full-service design is not feasible.

Our Design Guides provide a few comprehensive design plans for a client's space, including some space planning suggestions, material and color palettes, specific products like lighting and plumbing fixtures, furniture, cabinetry, etc., and recommendations for some of our favorite budget-friendly sources. Design Guides also allow clients the benefit of accessing ASI trade discounts to save 10-25% on most home-related products.
